Addendum #1

Continuous Recruitment # 22

Title: Access to Recovery – Clinical Treatment

Submission Deadline: Continuous Recruitment through 31 Dec 09

Question: Are urinalysis screens required once per week for Residential, Outpatient and Intensive Outpatient services? If so, is this once weekly screen covered in the rate reimbursed for services?

Response: Toxicology screening is expected to be done as clinically indicated for the level of care. We do not expect residential treatment providers to do weekly Urinalysis screens. However, those clinically required screens are included in the rate. We would however, unless otherwise clinically indicated and noted in the record, expect outpatient providers to conduct weekly screens. These screens are included in the rate. If more than weekly screens are required by the referral source (i.e. DCYF) or clinically indicated and noted in the original assessment, the toxicology fee would be reimbursed by the ATR.
